Phần 4

Xây Dựng Ứng Dụng Hướng Đối Tượng

TS. Phan Thượng Cang Khoa CNTT&TT-Đại học Cần Thơ

```
public class ConNguoi {
    private String cccd, hten;

public ConNguoi() { ... }
    public void nhap() { ... }
    public void in() { ... }
    protected void sosanh() { ... }
}
TS. Phan Thurping Cang
```

3 Quan hệ: Association (gắn kết)

```
      ConNguoi
      DiaChi

      - cccd : chuỗi
      - so : int

      - hten : chuỗi
      - duong : chuỗi

      + nhap() : void
      + nhap() : void

      + in() : void
      + in() : void
```

```
public class ConNguoi {
   private String cccd, hten;
   private DiaChi dchi;

   public ConNguoi() { ... }
   public void nhap() { ... }
   public void in() { ... }
}
```

```
public class DiaChi {
   private int so;
   private String duong;

   public DiaChi(){...}
   public void nhap(){...}
   public void in(){ ... }
}
```

Quan hệ: Association (gắn kết)

```
      ConNguoi
      DiaChi

      - cccd : chuỗi
      - so : int

      - hten : chuỗi
      - duong : chuỗi

      + nhap() : void
      + nhap() : void

      + in() : void
      + in() : void
```

```
public class ConNguoi {
   private String cccd, hten;
   private DiaChi dchi[];

   public ConNguoi() { ... }
   public void nhap() { ... }
   public void in() { ... }
}
```

```
public class DiaChi {
   private int so;
   private String duong;

   public DiaChi(){...}
   public void nhap(){...}
   public void in(){ ... }
}
```

3 Quan hệ: Association (gắn kết)

```
ConNguoi

- cccd : chuỗi

- hten : chuỗi

+ nhap() : void
+ in() : void

DiaChi

- so : int
- duong : chuỗi

+ nhap() : void
+ in() : void
```

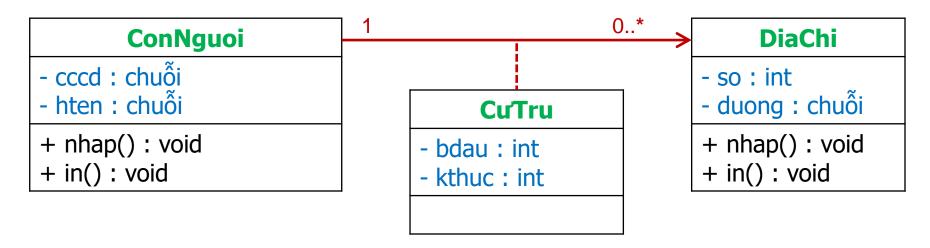

```
public class ConNguoi {
   private String cccd, hten;
   private DiaChi dchi[];

   public ConNguoi() { ... }
   public void nhap() { ... }
   public void in() { ... }
}
```

```
public class DiaChi {
   private int so;
   private String duong;
   private ConNguoi c;

   public DiaChi(){...}
   public void nhap(){...}
   public void in(){ ... }
}
```

Quan hệ: Association (gắn kết)

```
public class ConNguoi {
   private String cccd, hten;
   private CuTru ctru[];

   public ConNguoi() { ... }
   public void nhap() { ... }
   public void in() { ... }
}
```

```
public class CuTru {
   private int bdau,kthuc;
   private DiaChi dchi;

   public CuTru(){...}
   public void nhap(){...}
   public void in(){ ... }
}
```

3 Quan hệ: Aggregation (bao gồm)

```
ConNguoi

- cccd : chuỗi

- hten : chuỗi

+ nhap() : void

+ in() : void

CanhTay

- dai : float

+ nhap() : void

+ in() : void
```

```
public class ConNguoi {
   private String cccd, hten;
   private CanhTay c1, c2;

   public ConNguoi() { ... }
   public void nhap() { ... }
   public void in() { ... }
}
```

```
public class CanhTay {
    private float dai;
    public CanhTay(){...}
    public void nhap(){...}
    public void in(){ ... }
}
```

3 Quan hệ: Composition (thành phần)

```
ConNguoi

- cccd : chuỗi

- hten : chuỗi

+ nhap() : void

+ in() : void

CanhTay

- dai : float

+ nhap() : void

+ in() : void
```

```
public class ConNguoi {
   private String cccd, hten;
   private final CanhTay c1,c2;

   public ConNguoi() { ... }
   public void nhap() { ... }
   public void in() { ... }
}
```

```
public class CanhTay {
    private float dai;
    public CanhTay(){...}
    public void nhap(){...}
    public void in(){ ... }
}
```

3 Quan hệ: Generalization (thừa kế)

```
ConNguoi

- cccd : chuỗi

- hten : chuỗi

+ nhap() : void

+ in() : void

NhanSu

- mso : int
- dvi : chuỗi

+ nhap() : void

+ in() : void
```

```
public class ConNguoi {
   private String cccd, hten;
   public ConNguoi() { ... }
   public void nhap() { ... }
   public void in() { ... }
}
```

Realization (thực thi):

```
      ConNguoi
      Movable

      - cccd : chuỗi
      + nhap() : void

      - hten : chuỗi
      + in() : void

      - diToi() : void
      + diLui() : void
```

```
public class ConNguoi
    implements Movable {
    private String cccd, hten;

    public ConNguoi() { ... }
    public void nhap() {...}
    public void in() {...}
    public void diToi() {...}
    public void diToi() {...}
}
```

```
public interface Movable {
   public void nhap();
   public void in();
   public void diToi();
   public void diLui();
}
```

Quan hệ: dependency (phụ thuộc)

```
public class ConNguoi {
  private String cccd, hten;
  public void laiXe(LuatGT 1){ ... }

  public ConNguoi() { ... }
  public void nhap() {...}
  public void in() {...}
}
```
